Proposal for Test Client

Prepared on 24 September 2026

DOCUMENT Business Proposal	**CLIENT** Test Client

Overview

This proposal outlines the development of a comprehensive software system designed to manage AC service requests, optimize technician assignments based on location and workload, and provide real-time status tracking with automated email updates for management.

Client Requirements

- A software system for managing AC service requests and technician assignments.
- Service requests should be automatically assigned to technicians based on location and workload.
- The system must track the status of service requests and send tracking updates to the manager via email.
- Technicians must mark their daily attendance and receive their assigned jobs for the day.

Variations in Schema

- Based on location and workload.
- Technicians with negative reviews or returns should not be assigned new requests.
- to the manager via email
- and receive their assigned jobs for the day
- Generate daily graphical reports of technician work activities, including service requests attended, closed, service charges collected, and new products sold.
- Implement a WhatsApp chatbot for service requests.

Proposed Solution

The proposed solution is a centralized software system that digitizes and streamlines AC service operations. It will feature an automated routing engine that evaluates technician location and current workload to assign service requests dynamically. The platform will include a real-time tracking dashboard accessible to the manager, which will trigger automated email notifications for status updates. Additionally, the system will provide a dedicated interface for technicians to log their daily attendance and view their assigned job schedules for the day.

Scope of Work

- Develop the core software system for managing AC service requests and technician assignments.
- Implement the automated assignment logic to route service requests to technicians based on location and workload.
- Build the status tracking module and configure automated email notifications to send updates to the manager.
- Create the technician portal functionality to allow daily attendance marking and daily job assignment viewing.

Timeline

The client has requested a written proposal to be sent for review prior to finalization.

Pricing

The project is expected to be priced at approximately one lakh.

Providing a server is an additional cost if the client does not have their own server.

Next Steps

- We will await the review of this proposal. Upon approval, we will proceed to discuss the project in detail and outline the subsequent steps for implementation.
