Proposal for trailai1

Prepared on 26 September 2026

DOCUMENT Business Proposal	**CLIENT** trailai1

Overview

The client operates a business involving Maintenance Contracts (AMC) and Management Contracts (MC). The verified scope addresses three core operational areas: staff assignment to contracts, automated service report dispatch, and location-based connectivity with service agencies to streamline coordination.

Client Requirements

- Staff should be able to be assigned to MC.
- A service report must be sent.
- Service agencies should be connected location-based.

Variations in Schema

- Integrate a WhatsApp chatbot with the application.
- Service agencies should be connected location-based.

Proposed Solution

To address the verified requirements, the solution will establish a streamlined digital framework for managing Maintenance and Management Contracts. This involves implementing an automated staff assignment module within the admin interface to replace manual processes. A structured service report dispatch workflow will be configured to ensure mandatory reports are sent consistently and on time. Additionally, a location-based connection will be established with service agencies to facilitate efficient coordination and reduce manual friction.

Scope of Work

- Configure and deploy an automated staff assignment system within the existing admin interface.
- Develop and implement a mandatory service report dispatch workflow.
- Establish a location-based connectivity framework for service agencies.

Business Cost & Efficiency Impact

The client operates a business involving Maintenance Contracts (AMC) and Management Contracts (MC), requiring staff assignment, service report dispatch, and location-based connectivity with service agencies.

Business Area	Current Driver	Automation Opportunity	Impact / Measurement
Service Reporting	Manual dispatch of service reports via unspecified channels.	Integrate a WhatsApp chatbot to automate service report delivery.	Illustrative scenario Example: If current_manual_time_per_report = 5 minutes, automated_time_per_report = 1 minute, and reports_per_month = 100, then total monthly time saved = (5 - 1) * 100 = 400 minutes. Measure: Time saved per service report sent Assumption: Time values are

			illustrative placeholders; actual values are missing.
Staff Assignment	Manual assignment of staff to MC within admin.	Automated staff assignment to MC based on location or availability.	Illustrative scenario Example: If manual_assignment_time = 10 minutes, automated_assignment_time = 2 minutes, and assignments_per_month = 50, then total monthly time saved = (10 - 2) * 50 = 400 minutes. Measure: Time saved per assignment Assumption: Time values are illustrative placeholders; actual values are missing.
Agency Coordination	Manual coordination with service agencies due to lack of location-based connectivity.	Implement location-based connection with service agencies.	Illustrative scenario Example: If current_coordination_time = 30 minutes, new_coordination_time = 5 minutes, and coordination_frequency = 20 events/month, then total monthly time saved = (30 - 5) * 20 = 500 minutes. Measure: Reduction in coordination time or errors Assumption: Time values are illustrative placeholders; actual values are missing.

Client data required to replace illustrative assumptions: Number of service reports sent per month; Number of staff assignments per month; Number of agency coordination events per month; Time to manually send a service report; Time to automate staff assignment; Time spent on manual agency coordination

Timeline
